+ Wireless printing reduces wire-tangle
Decent print quality
Handy 2.4inch LCD display

- A tad slow at printing and photocopying

Think of the X9350 as an all-in-one maid. It is built with multi-function capability in mind which combines a sheet-fed scanner, colour printer, copier and a fax. This is pretty common in the market nowadays. What makes the X9350 stand out though is the way the X9350 allows you to connect to it. USB, Ethernet and Wi-Fi. Yeap. Wi-Fi! I got your attention there didn't I?

Lexmark has designed the X9350 as a SOHO printer. It includes all the essential business features, which also means that it looks lean and professional. But I got to say that the white design and the sleek smooth feel of top cover is a nice touch. The front panel of the printer has all the basic copying function and fax control with a 2.4 inch colour LCD screen that can be flipped up for previewing pictures and selecting menu. The LCD screen is perfect lying down if you are standing up looking

at it together with the four direction keys and an OK key. The numeric keypad can be used to dial in fax number or set the amount of copies that you want to photocopy.

On the front of the printer, there is a media slot available which can support CF, MMC/SD, Memory Stick and xD for direct printing. Pretty handy. But again, this is a standard feature available in most printers nowadays. What is interesting is the built-in wireless 802.11g adapter with a backward compatibility to older 802.11b wireless networks. There is also wired support for network compatibility.

The print quality though is more on the mediocre side. Do not expect to be printing poster quality document from the X9350. Suffice to say that the print quality is quite good for a multi-function printer. The colors are lively and sharp. The proportion is correct. The printing speed

though is slightly mediocre. Its not speedy enough to handle the workload. Not to mention that the rate at which it photocopies is rather slow. It helps that there is a progress bar to display the progress which makes the waiting easier to endure, slightly.

Alex Teh

CHIP Conclude: The colour LCD screen is vibrant and colourful. The wireless and wired support for network compatibility is a indeed a welcome feature and top that with a built in fax machine and you've got yourself a heavy duty business oriented printer. So I would warn none office user to stay clear off the X9350 unless you are looking for a SOHO printer. Because this device is built just for that. I would certainly choose the X9350 over other printers for some SOHO action. **CHIP**
